Trans. of [Yogyo Kyokaiishi] (Japan) 1960, v. 68, no
no. 773, p. 132-137.

DESCRIPTORS: *Glass, Silicates, Phosphates, *Cerium,
*Absorption spectrum, Spectra (Visible and ultra-
violet).

By preparing glasses containing cerium under various
conditions, their light absorptions were investigated.
As a result, the following points were established: (1) In
the silicate glass, the trivalent cerium ions have an
absorption band which is sharp but not very large, with
a maximum at 320 m μ , and the tetravalent cerium ions
have a wide and large absorption band covering the
